Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

09/781,273

Applicant(s)

OHTA, YOSHIKI

Examiner

Justin Michalski

Art Unit

2644

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 13 February 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-4 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 3
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Plunkett (US Patent 5,386,478) in view of Koyama et al. (US Patent 5,581,621).

Regarding Claim 1, Plunkett discloses a sound field correcting method in an audio system, for supplying audio signals (Figure 1, outputs of source block 22) to a first sound generating means (speaker 14L) having a first reproducing frequency band and a second reproducing frequency band (Plunkett discloses controllers 24 which contain separately controllable frequency bands (i.e. first and second bands) (Column 3, lines 66-69) and a second sound generating means (Speaker 14R) having the second reproducing frequency band respectively to reproduce thereof, said correcting method comprising: a first step of supplying a noise (Plunkett discloses test signal (i.e. noise) to each loudspeaker) (Column 3, lines 28-31) to said first sound generating means and then detecting (microphone 36) a reproduced sound in the first reproducing frequency band and a reproduced sound in the second reproducing frequency band, that are reproduced by said first sound generating means; a second step of supplying the noise to said second sound generating means (Plunkett discloses test signal (i.e. noise) to each loudspeaker) (Column 3, lines 28-31) and then detecting the reproduced sound in

the second reproducing frequency band (microphone 36); and a third step of adjusting levels of the audio signals supplied to said first and second sound generating means are adjusted to a predetermined target characteristic (Plunkett discloses making corrective adjustments (i.e. adjusting towards target characteristics) (Paragraph bridging paragraphs 1 and 2). Plunkett does not disclose using an average level of reproduced sound for adjusting the sound generating means. Koyama et al. discloses an automatic adjustment system of an audio device (Figure 1). Koyama et al. further discloses a method of making an automatic adjustment to a parameter of an audio system based on an average level of a low band frequency response (Column 24, lines 54-59). Although the adjustment is made based on an average of a frequency response rather than an average time detection result, it would have been obvious to one skilled in the art at the time the invention was made to analyze and make an adjustment based on an average of several values as disclosed by Koyama et al. automatically making an adjustment to enhance the output of an audio system.

Regarding Claim 2, Plunkett discloses a sound field correcting method in an audio system, for supplying audio signals (Figure 1, outputs of source block 22) to a first sound generating means (speaker 14L) having a first reproducing frequency band and a second reproducing frequency band (Plunkett discloses controllers 24 which contain separately controllable frequency bands (i.e. first and second bands) (Column 3, lines 66-69) and a second sound generating means (Speaker 14R) having the second reproducing frequency band respectively to reproduce thereof, said correcting method

Art Unit: 2644

comprising: a first step of supplying a noise (Plunkett discloses test signal (i.e. noise) to each loudspeaker) (Column 3, lines 28-31) to said first sound generating means and then detecting (microphone 36) a reproduced sound in the first reproducing frequency band and a reproduced sound in the second reproducing frequency band, that are reproduced by said first sound generating means; a second step of supplying the noise to said second sound generating means (Plunkett discloses test signal (i.e. noise) to each loudspeaker) (Column 3, lines 28-31) and then detecting the reproduced sound in the second reproducing frequency band (microphone 36); a third step of adjusting levels of the audio signals supplied to said first and second sound generating means are adjusted to a predetermined target characteristic (Plunkett discloses making corrective adjustments (i.e. adjusting towards target characteristics) (Paragraph bridging paragraphs 1 and 2). Plunkett does not disclose using an average level of reproduced sound for adjusting the sound generating means. Koyama et al. discloses an automatic adjustment system of an audio device (Figure 1). Koyama et al. further discloses a method of making an automatic adjustment to a parameter of an audio system based on an average level of a low band frequency response (Column 24, lines 54-59). Although the adjustment is made based on an average of a frequency response rather than an average time detection result, it would have been obvious to one skilled in the art at the time the invention was made to analyze and make an adjustment based on an average of several values as disclosed by Koyama et al. automatically making an adjustment to enhance the output of an audio system.

Regarding Claim 3, Plunkett discloses a device as stated apropos of claim 1 above further disclosing speakers (14) reproducing a frequency band substantially equal to an audio frequency band, and Koyama et al. further discloses reproducing a low frequency band substantially equal to a low frequency band (Figure 2, converter 26) to a subwoofer.

Regarding Claim 4, Plunkett discloses a device as stated apropos of claim 1 above further disclosing speakers (14) reproducing a frequency band substantially equal to an audio frequency band, and Koyama et al. further discloses reproducing a low frequency band substantially equal to a high frequency band (Figure 2, converter 29) to a high frequency speaker.

**Conclusion**

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin Michalski whose telephone number is (703)305-5598. The examiner can normally be reached on 8 Hours, 5 day/week.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bill Isen can be reached on (703)305-4386. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
